and the policies that contribute to these longstanding problems. A model that has been used throughout the United States and internationally to accomplish that objective is the Crime Prevention through Environmental Design (“CPTED”) model. The premise of this model is that crime can be prevented by conducting an evaluation of the total environment in order to reduce the opportunity for crime.

In practice, CPTED is a multi-disciplinary approach of crime prevention that uses urban and architectural design and the management of built and natural environments. CPTED strategies aim to reduce victimization, deter offender decisions that precede criminal acts, and build a sense of community among inhabitants so they can gain territorial control of areas, reduce crime, and minimize the fear of crime. This is accomplished through the evaluation and implementation of the 6 CPTED concepts: Image/Maintenance, Natural and Physical Surveillance, Territoriality, Access Control, Activity Support, and Target Hardening.
